# HackAThon

Rajasthan 4.0

—

Report by: Mrugesha Panchal

21st March 2018

Place: Rajasthan, India.

Introduction

Was the Government of Rajasthan is committed to making a competitive and transparent ecosystem for the innovative minds and thinkers across the nation. On the same line, the Government of Rajasthan (GoR) is organizing the fourth edition of **Hackathon** after its huge success in the past.

Hackathon 4.0, a 36 hour non-stop a coding marathon is an effective tool used by the state to promote IT & e-governance initiatives. Coders, developers & designers will have a prodigious platform to use their out-of-the-box thinking on Bhamashah, e-Mitra, Artificial Intelligence, Internet of Things, AR/VR, Blockchain, Machine Learning, Data Warehouse, and Data Mobility.

The event will witness dignitaries from Government of India, respected officials from Government of Rajasthan, eminent IT leaders and reputed spokespersons from different corners of the world.

Key Takeaways:

● Exclusive opportunity to work on platforms like Bhamashah, e-Mitra, Artificial Intelligence, Internet of Things, AR/VR, Blockchain, Bioinformatics, Machine Learning, Data Warehouse, and Data Mobility.

● The three leading teams will earn a contract with the Department of Information Technology & Communication, Government of Rajasthan worth Rs.15 Lacs, Rs.10 Lacs, and Rs.7.5 Lacs respectively.

● Participants would also be nominated for 10 other prize categories which would include exciting prizes like iPad, Tablet, Cell Phones, and a lot more.

Journey to Rajasthan HackAThon 4.0:

It was one of the most amazing moments for us. We booked bus tickets just two days before for this hackathon and we get the night bus ticket. We reached Jaipur on an early morning.

First, we reached Rajasthan college, Jaipur. At this place, the world biggest hackathon Rajasthan HackAThon 4.0 is going to hold. We reached and then we come to know that hackathon was going to begin from the next day.

After clearing all confusion we decide to stay in zostel for a night. This was one of the most amazing places I have ever visited. I will also give some of it photos in this report. I am also suggesting you visit it once.

Then we again come back to the Rajasthan college and our two-day HackAThon begins. We make our product for people who work with toxic gases or at a place where toxic gases are more in quantity. So we come up with a band which will not reduce toxic gases but it can help people to get knowledge about toxicity around them.

And we made it also present it to them. We also make some awesome network there. And meet some mindblowing and awesome peoples.

And after ending of course we are not winner over here. But we got to new we make new friends and meet new people with a different mindset. And our journey to Rajasthan HackAThon 4.0 end here.

About Project

I will describe my project with a problem statement, solution, and photos.

Problem Statment:

Our problem statement is to make something creative that can help people who are working with dangerous gases.

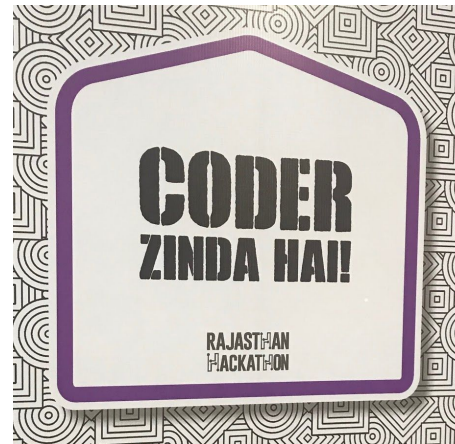

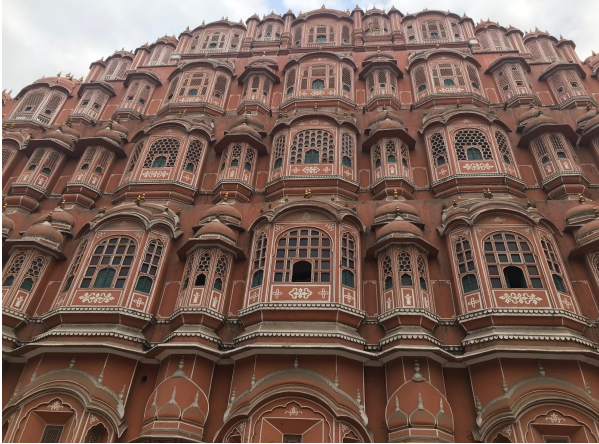

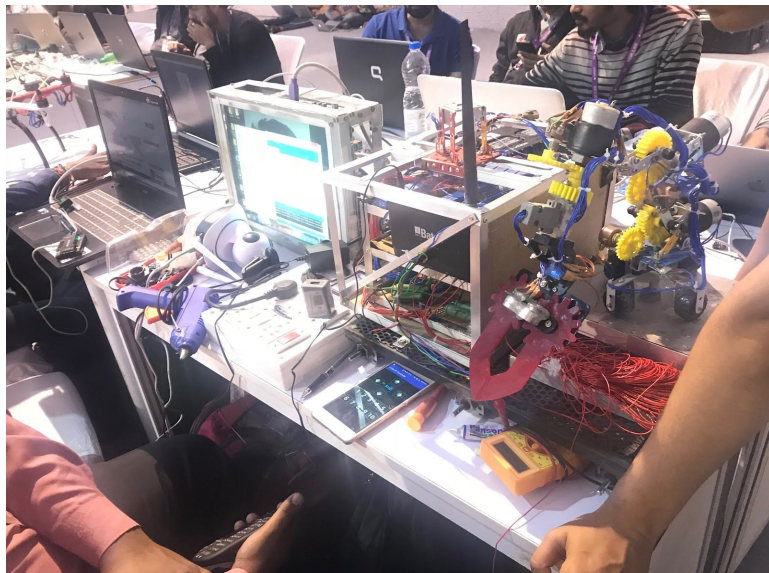

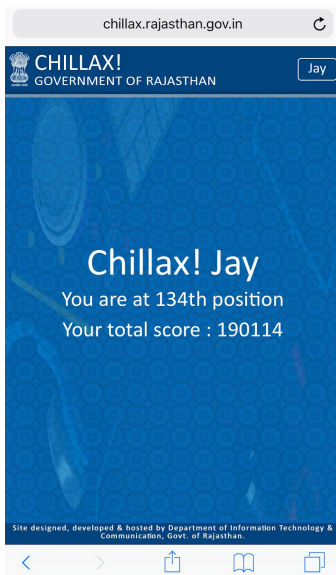

Solution:

So We come up with a solution to make a device which will detect toxicity of that particular place. And help the worker to know about that place.

So if that place was not good then they can run away from that place and save their life and that device was connected with the Internet so we can get data and we can also store that data anywhere you want.
